

Let's Get Organics Out of the Waste Stream!

Turn your organic waste into a resource

Share your thoughts on organics recycling – we want to make it a better experience

Did you know? Your organic waste is actually a great resource that can be recycled at commercial composting facilities to be used in landscaping and road construction projects! About 30 percent of what we throw away is organic material, meaning food scraps and food-soiled paper products. This includes fruits, vegetables, meat, bones, bread, eggshells, non-recyclable food-soiled paper and more that can be utilized for composting.

Please take a quick 3-5minute survey and tell us how you feel about organics recycling at <https://www.surveymonkey.com/r/LRJW7C7>
